FUND DESCRIPTION

Investment objective

Long-term capital appreciation by investing in undervalued companies with strong fundamentals. To eliminate market risk, the relevant indices are shorted, to obtain a beta-neutral portfolio. "Buy and hold" applied to solid companies, with good profitability and selling at a low price. Very little trading (average holding period is above 2 years), concentration (around 20 main positions), global scope. A special characteristic is the Company's attempt to obtain very steady results, irrespective of the direction the overall markets will take.

Risk factors

The Fund has an average volatility of equity indexes. Currencies are hedged when it is considered appropriate to do so. Companies are always bought very cheap, which limits the downside. Most of them pay high dividends.
